# Superstore Sales Analysis Dashboard

## Introduction

This project uses the Superstore dataset to analyze sales, profit, discounts, and regional performance using Microsoft Excel. An interactive dashboard was created using Pivot Tables, Pivot Charts, and Slicers to easily understand business trends and support better

## Dataset Insights

- Office Supplies category has the highest average sales.
- Binders receive the highest total discount among sub-categories.
- Sales and profit are not evenly distributed across all categories.
- A few regions contribute most overall sales and profit.
- Higher order quantities tend to generate better profits.
- Discount heavy products may be reducing overall profitability.

### Tools & Technologies:

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- Dashboard Design & Formatting

**Conclusion :-** The Superstore dataset analysis shows that Technology is the highest-performing category, while profitability varies across regions and sub-categories. Effective discount management and focusing on profitable products can help increase overall business growth and profit.
